

ACE

Gas Springs

*Your Best Solution for Lifting Lids,
Hoods, Panels and Guards*

*Includes New Line of Stainless Steel Models
for Packaging, Food Processing, Medical,
Marine and More*

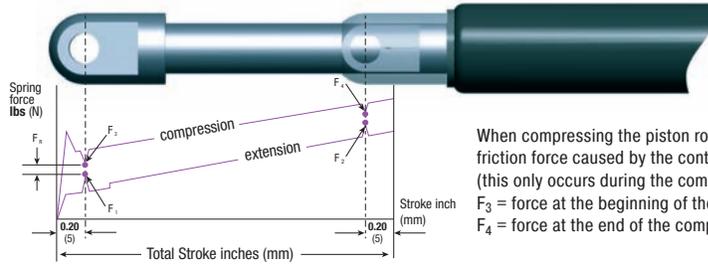

Gas springs are universally accepted, wherever you want to

- push
- pull
- lift
- lower, or
- position

covers, lids or other components by hand without using an external energy source. ACE gas springs are individually filled to a predetermined pressure to suit a customer's requirement (extension Force F_1). The cross-sectional area of the piston rod and filling pressure determines the extension force $F = p \cdot A$. During the compression of the piston rod, nitrogen flows through an orifice in the piston. The nitrogen is compressed by the volume of the piston rod. As the piston rod is compressed the pressure increases, so increasing the reaction force (progression). The force depends on the proportional relationship between the piston rod and the inside tube diameter, which is approximately linear.

Force-Stroke Characteristics of Gas Spring (Push Type)

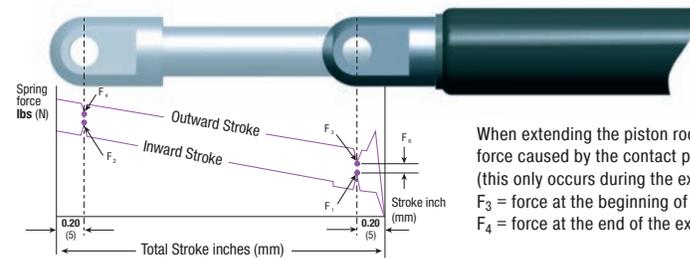

When compressing the piston rod, there is an additional friction force caused by the contact pressure of the seals (this only occurs during the compression stroke) F_R
 F_3 = force at the beginning of the compression stroke
 F_4 = force at the end of the compression stroke

F_1 = nominal force at 68 °F (20 °C) – this is the pressure figure normally used when specifying the gas spring

F_2 = force in the complete compressed position

Force-Stroke Characteristics of Traction Gas Spring (Pull Type)

When extending the piston rod, there is an additional friction force caused by the contact pressure of the seals (this only occurs during the extension stroke) F_R
 F_3 = force at the beginning of the extension stroke
 F_4 = force at the end of the extension stroke

F_1 = nominal force at 68 °F (20 °C) this is the pressure figure normally used when specifying the gas spring

F_2 = force in the complete extended position

Gas Springs (Push Type)

Type	¹ Progression approx. %
GS-8	28
GS-10	20
GS-12	25
GS-15	27
GS-19	36 - 42 ³
GS-22	39 - 50 ³
GS-28	60 - 95 ³
GS-40	47 - 53 ³
GS-70	25

Gas Springs (Pull Type)

Type	¹ Progression approx. %
AGS-15	35
AGS-19	37 - 41 ²
AGS-22	50 - 56 ²
AGS-28	48 - 52 ²

Gas Springs (Pull Type)

Type	¹ Progression approx. %
GZ-15	23
GZ-19	10
GZ-28	20
GZ-40	40

¹ The progression (the slope of the force line in the diagrams above) is due to the reduction of the internal gas volume as the piston rod moves from its initial position to its fully stroked position. The approx. progression values given for standard springs can be altered on request.

Effect of temperature: The nominal F_1 figure is given at 68 °F (20 °C). An increase of 50 °F (10 °C) will increase force by 3.4%.

Force tolerance on F_1 force: ±7%

² Depending on the filling force.

³ Depending on the stroke.

Service Life

Force tolerance: ±7%

Effect of temperature: An increase in temperature of each 50 °F (10 °C) will increase force by approx. 3.4 %.

Temperature range: -49 °F (-45 °C) to 176 °F (+80 °C) – special seals from -49 °F (-45 °C) to 392 °F (200 °C)

Mounting: The gas springs should ideally be installed with the **piston rod pointing downwards** to use the end damping during the extension stroke to smoothly decelerate the motion of the gas spring. Some ACE gas springs have a uniquely designed front bearing with an integrated grease chamber allowing the gas spring to be mounted and operated in any position if required.

When fitting the gas springs ensure that the stroke is fully extended (GZ type fully compressed), this makes assembly and disassembly much easier. **Support the moving mass/flap during assembly or disassembly to prevent accidents. To avoid twisting or side loading, it is recommended that ball joints or other pivoted mounting attachments are used.** The mounting attachments must always be positively secured onto the threaded studs of the gas spring.

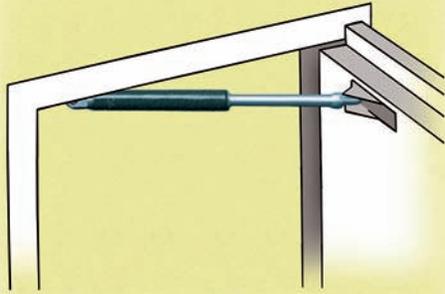

ACE gas springs are maintenance-free. DO NOT oil or grease the piston rod!

The piston rod must be protected from any hits, scratches or dirt and especially paint. Damage to the surface finish of the piston rod will destroy the sealing system and cause loss of pressure. The outer body must not be deformed or mechanically damaged.

ACE gas springs can be stored in any position. Experience has shown that long storage periods do not result in loss of pressure. However you may experience some "stiction" requiring a higher effort to move the gas spring for the first time after a long storage period.

Generally, ACE gas springs are tested to 70,000 strokes. This is equivalent to the seal lifetime (depending on model size) to a distance travelled of 1.24 miles (2 km) up to 6.21 miles (10 km). Depending upon the application and operating environment, the service life of these gas springs may be much longer. 500,000 strokes or more have been achieved on some applications.

Lifetime for traction gas springs see pages 34 to 37.

Doors open and close safely

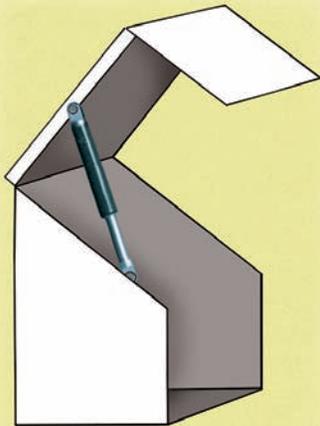

ACE industrial gas springs make opening and closing doors of rescue helicopters easier.

The maintenance-free, sealed systems are installed in the access doors of helicopters of the type EC 135. There, they allow the crew to enter or exit the helicopter quickly, thus contributing to enhanced safety.

The **GS-19-300-CC** gas springs provide a defined retraction speed and secure engagement of the door lock. The integrated end position damper allows gentle closing of the door and saves wear and tear on the valuable, lightweight material.

Industrial gas springs: For safe entry and exit

Protection under the hood

ACE industrial gas springs prevent injuries during maintenance work on harvesting machines.

The blades of corn pickers are arranged under plastic hoods, which assure proper material flow within the machine. For maintenance purposes, the hoods, weighing about 15 lbs (7 kg), must be lifted up. To protect maintenance personnel from injury by falling hoods, they are kept in the open position by industrial gas springs of the type **GS-22-250-DD**.

Another advantage they offer is their stability under rough operating conditions due to their wear-resistant coating on the piston rod and the coated housing.

Enhanced protection: Industrial gas springs secure heavy hoods

Stainless Steel Gas Springs in Yachts, Ships & Boats

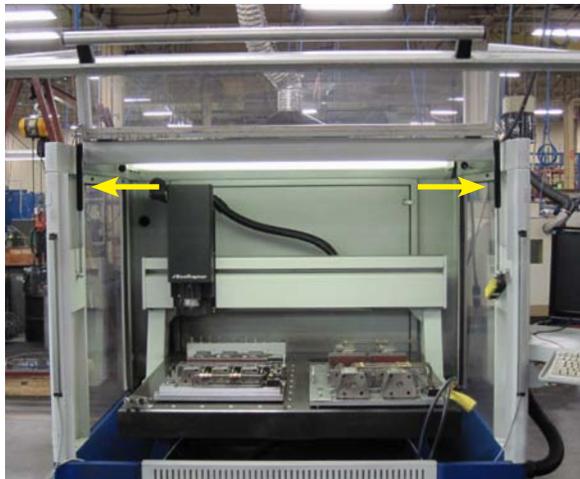

are ideal for lifting large, heavy hatches, lids, panels, lockers, companionways and access doors.

ACE Gas Springs in military vehicles open heavy doors to help with quick ingress and egress of troops. Heavy hatches and panels are opened with minimal effort. *Gas spring added to image below for application example only.*

Industrial Gas Springs from ACE remove the need for muscle power and provide controlled lifting motion for large, heavy doors, covers, lids, machine guards and access panels on production machinery.

Gas Springs from ACE are utilized in commercial applications for lifting large entryway panels, as well as hatches, lids and panels on RVs, emergency vehicles and construction equipment

Calculation

To obtain the ideal selection to give the optimum operation for a gas spring it is important to identify the following points:

- gas spring size
- required gas spring stroke
- mounting points on flap and frame
- extended length of the gas spring
- required extension force
- hand forces throughout the complete movement on the flap

With our **free calculation service** you can eliminate the time-consuming calculation and send us your details by fax or e-mail. Just complete the information shown on the calculation formula page number 6. Please attach a sketch of your application (a simple hand sketch is sufficient) in side view. Our application engineers will determine the optimum gas springs and mounting points and calculate the ideal situation to satisfy your requirements.

You will receive a quotation showing the opening and closing forces and our recommended mounting points to suit your application.

"Calculation offer with all required details for assembly!"

Safety Instructions

Gas springs are filled with nitrogen gas. Nitrogen is an inert gas that does not burn or explode and is not poisonous.

Please note!: the internal pressure of gas springs can be up to 4,350 psi (300 bar). Do not attempt to open or modify them.

ACE gas springs will operate in surrounding temperatures from -4 °F (-20 °C) to 176 °F (+80 °C). We can equip our springs with special seals to withstand temperatures as low as -49 °F (-45 °C) or as high as 392 °F (+200 °C). Gas springs should not be placed over heat or in open fire!

Disposal/Recycling: Gas Springs consist mostly of metal and the metal could be recycled, but first the gas pressure must be removed. Please ask for our disposal recommendations which advise how to depressurize the gas springs and make them safe to recycle.

All gas springs are marked with the part number, the production date and a warning sign "Do not open high pressure". We are not responsible for any damages of any kind that arises due to goods that are not marked accordingly.

Gas springs should be installed with the piston rod downwards. This position ensures best damping quality. **Only ACE gas springs include an integrated grease chamber which allows for alternative mounting opportunities.**

Gas springs should not be exposed to tilting or side load forces during operation or whilst static (this can cause bending of the piston rod or early wear).

Gas springs are maintenance-free. **Do not grease or oil the piston rod.**

The piston rod must not be painted and should be protected against shocks, scratches and dirt. The cylinder should not be deformed as such damage would destroy the sealing system.

ACE gas springs can be stored in any position. Pressure lost through long storage is not to be expected. There may be a sticking effect the first time you compress a spring. This may require a higher initial force to operate the gas spring for the first time (initial breakaway force).

The tolerance for the installation length is generally deemed to be ± 0.08 " (± 2 mm). If very high demands are placed on durability and stability, please avoid the combination of small diameter + long stroke + high force.

The force tolerance is $\pm 7\%$.

Please send us a sketch with dimensions of your application!
 Sketch is required in order to calculate.

Push type Pull type

Input date

Gas spring fixing points

The fixed point of the frame and the moving point of the flap are critical for the optimum operation.

Therefore please attach a sketch of your application (a few lines with their dimensions are sufficient)!

ACE industrial gas springs are maintenance-free and self-contained. They are available with body diameters from .31" (8 mm) up to 2.76" (70 mm), and forces from 2 lbs (10 N) up to 2,923 lbs (13,000 N) ex. stock. **ACE gas springs offer a high service life with a wear-resistant coating on the piston rod. Also an integrated low friction bearing with grease chamber which provides a very low break away force (GS-19 to GS-40).** It allows them to be mounted in any orientation, although rod downwards is preferable if you want to take advantage of the built-in end position damping. The valve allows the force to be adjusted to your specific requirements. A wide variety of interchangeable end fittings makes installation easy and versatile. ACE gas springs are universally applicable wherever you have lifting and lowering. They remove the need for "muscle power" and provide controlled motion for lids, hoods, machine guards etc. The ACE selection software quickly specifies the correct gas spring for your individual application and we can deliver, usually within 24 hours.

Function: ACE industrial gas springs provide a maintenance-free sealed for life system, being filled with high pressure nitrogen gas. The oil zone filling provides end position damping and internal lubrication for a long lifetime. On the extension stroke of the gas spring, for example when opening a car tailgate, the nitrogen gas flows through the metering orifice in the piston to provide a controlled opening speed and the oil zone provides damping at the fully open position to avoid impact damage. The gas spring should be mounted "rod down" for this damping to be effective. On closing the tailgate the gas spring helps support the weight. The metering orifice controls the extension and compression velocities of the gas spring.

Operating fluid: Nitrogen gas and oil

Mounting: In any position

Operating temperature range: -4 °F to +176 °F (-20 °C to +80 °C)

On request: Without damping, extended length damping, special force curves, special lengths, alternative end fittings.

Standard gas spring with valve.**

Technical Data

On request: Without damping, extended length damping, special force curves, special lengths, alternative end fittings, wiper, stainless steel.

Available force range F₁ at 68 °F (20 °C): 450 lbs to 2,923 lbs (2,000 N to 13,000 N)

Mounting: In any position

Advice: We recommend mounting with piston rod downwards to take advantage of the built-in end position damping.

End position damping length: Approx. 0.39" (10 mm)

Material: Body: Black coated steel or zinc plated steel. Piston rod: Hard chrome plated. End fittings: Zinc plated steel.

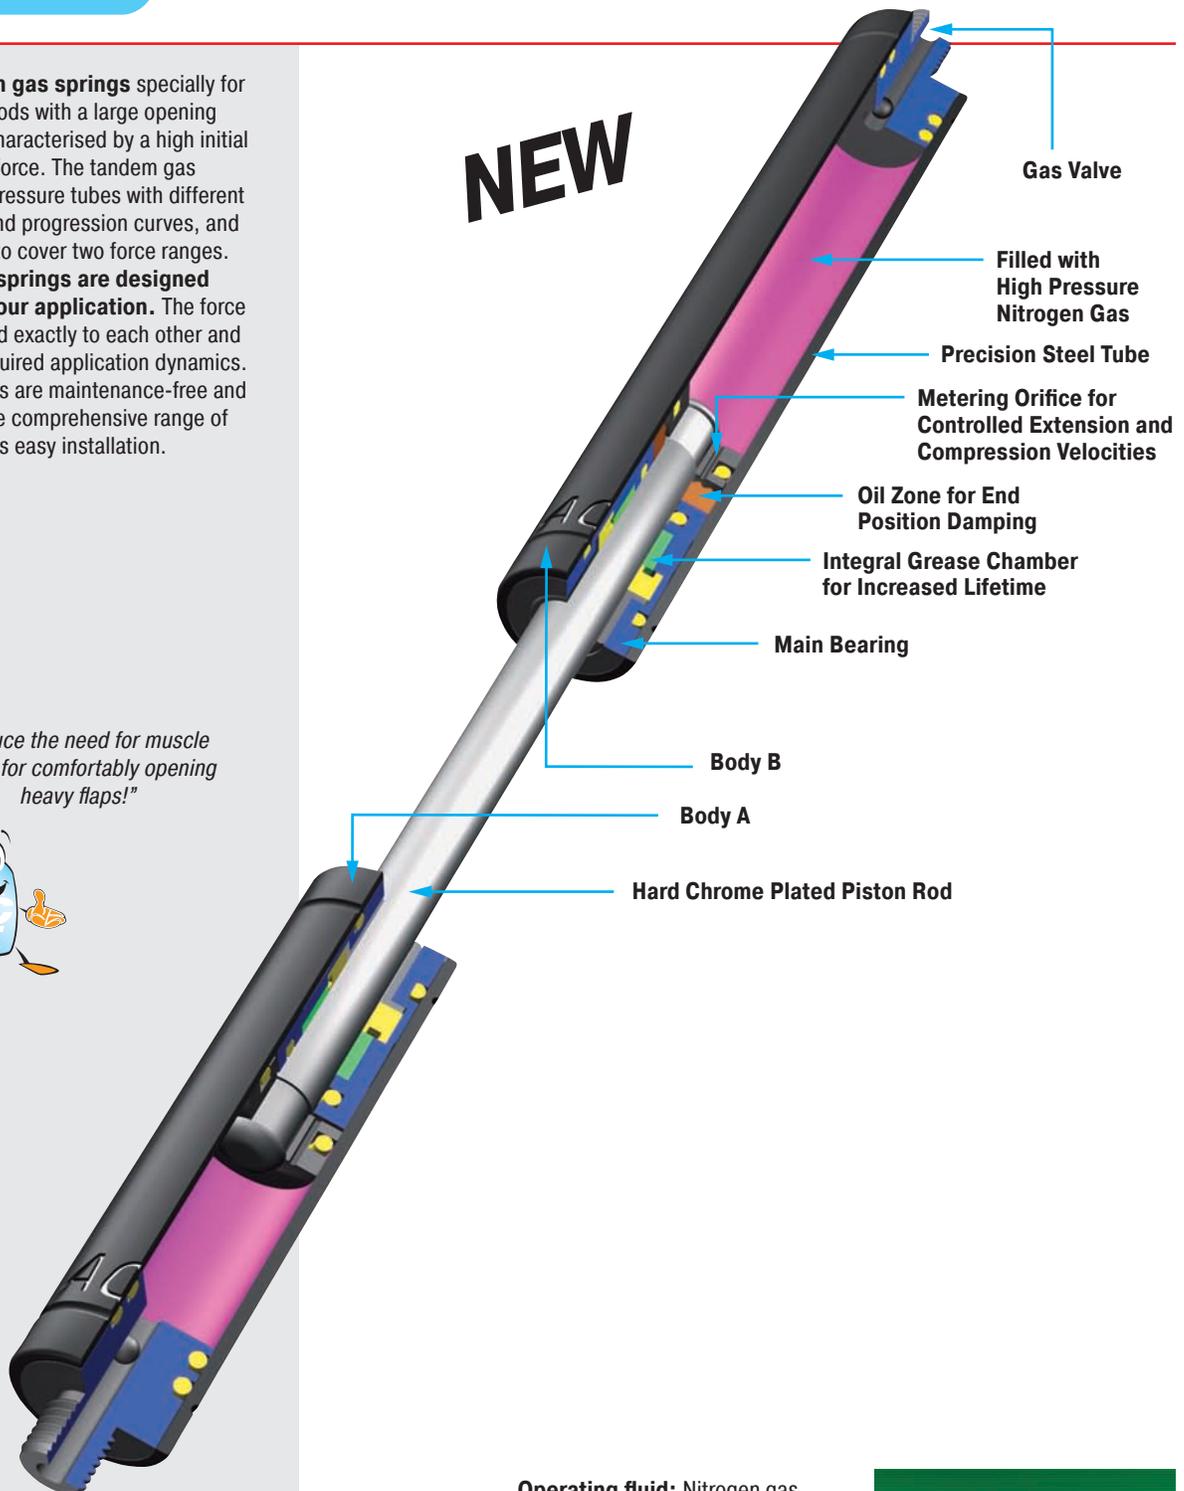

Progression: Approx. 25%, F₂ max. 3,653 lbs (16,250 N)

ACE offers **tandem gas springs** specially for heavy flaps and hoods with a large opening angle. These are characterised by a high initial force and low end force. The tandem gas springs have two pressure tubes with different extension forces and progression curves, and are therefore able to cover two force ranges. **The tandem gas springs are designed specifically for your application.** The force ranges are matched exactly to each other and adjusted to the required application dynamics. Tandem gas springs are maintenance-free and ready to install. The comprehensive range of fitting parts ensures easy installation.

"Reduce the need for muscle power for comfortably opening heavy flaps!"

NEW

Operating fluid: Nitrogen gas and oil

Material: Piston rod: Hard chrome plated steel. Bodies and end fittings: Zinc plated steel.

Mounting: According to calculation. Please adopt the mounting points determined by ACE.

Operating temperature range: -4 °F to 176 °F (-20 °C to 80 °C)

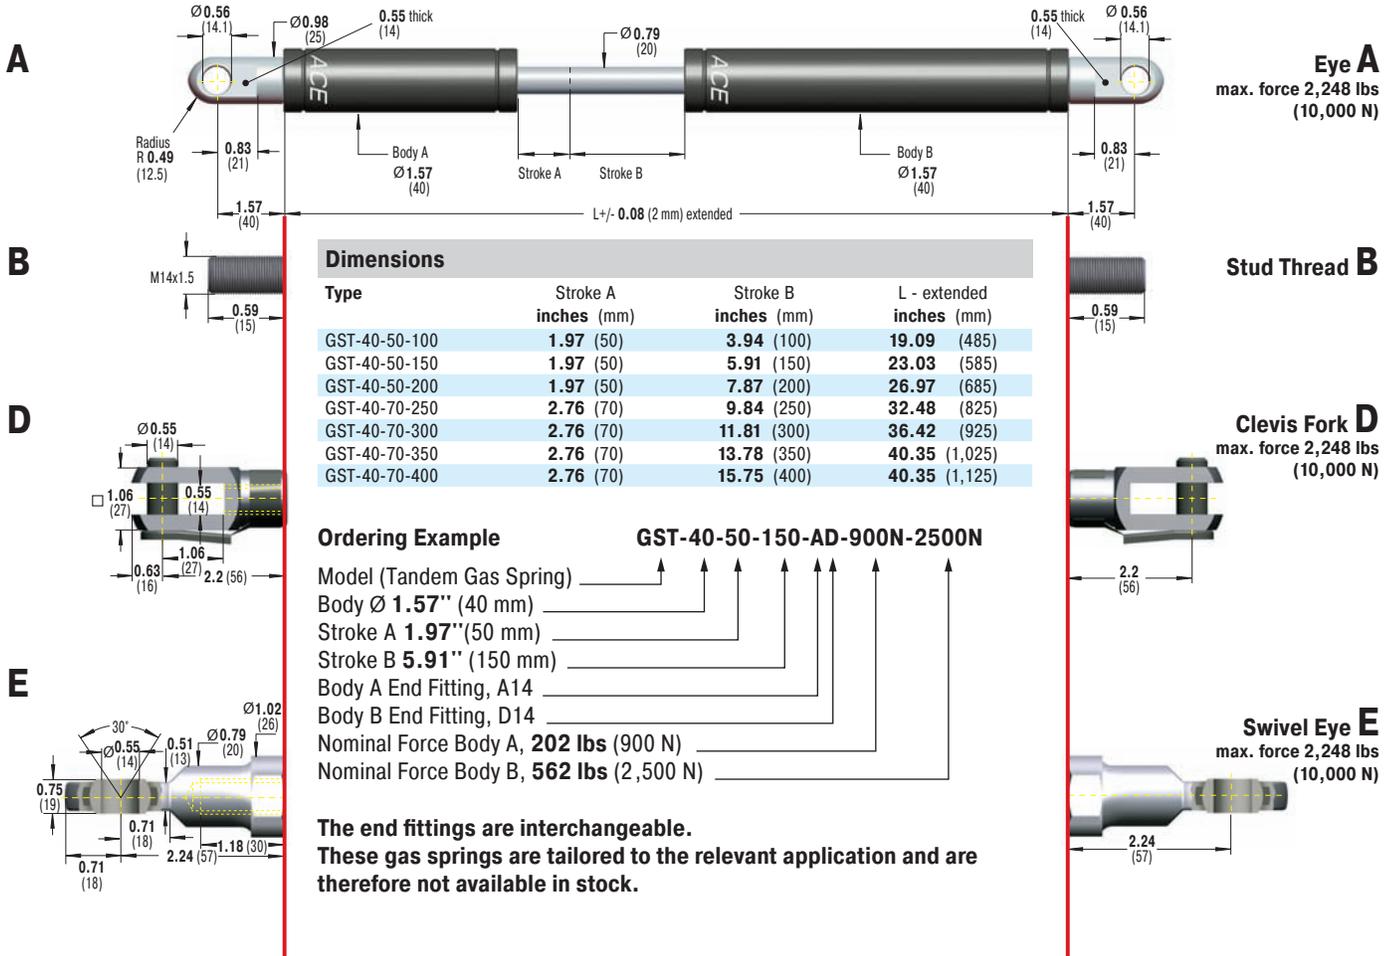

On request: Material 1.4301/1.4305, AISI 304/303 (V2A) and material 1.4404/1.4571, AISI 316L/316Ti (V4A).

Technical Data

On request: Without damping, standard length damping, special force curves, special lengths, alternative end fittings, wiper.

Available force range F_1 at 68 °F (20 °C): 67 lbs to 1,124 lbs (300 N to 5,000 N)

Mounting: According to calculation. Please adopt the mounting points determined by ACE.

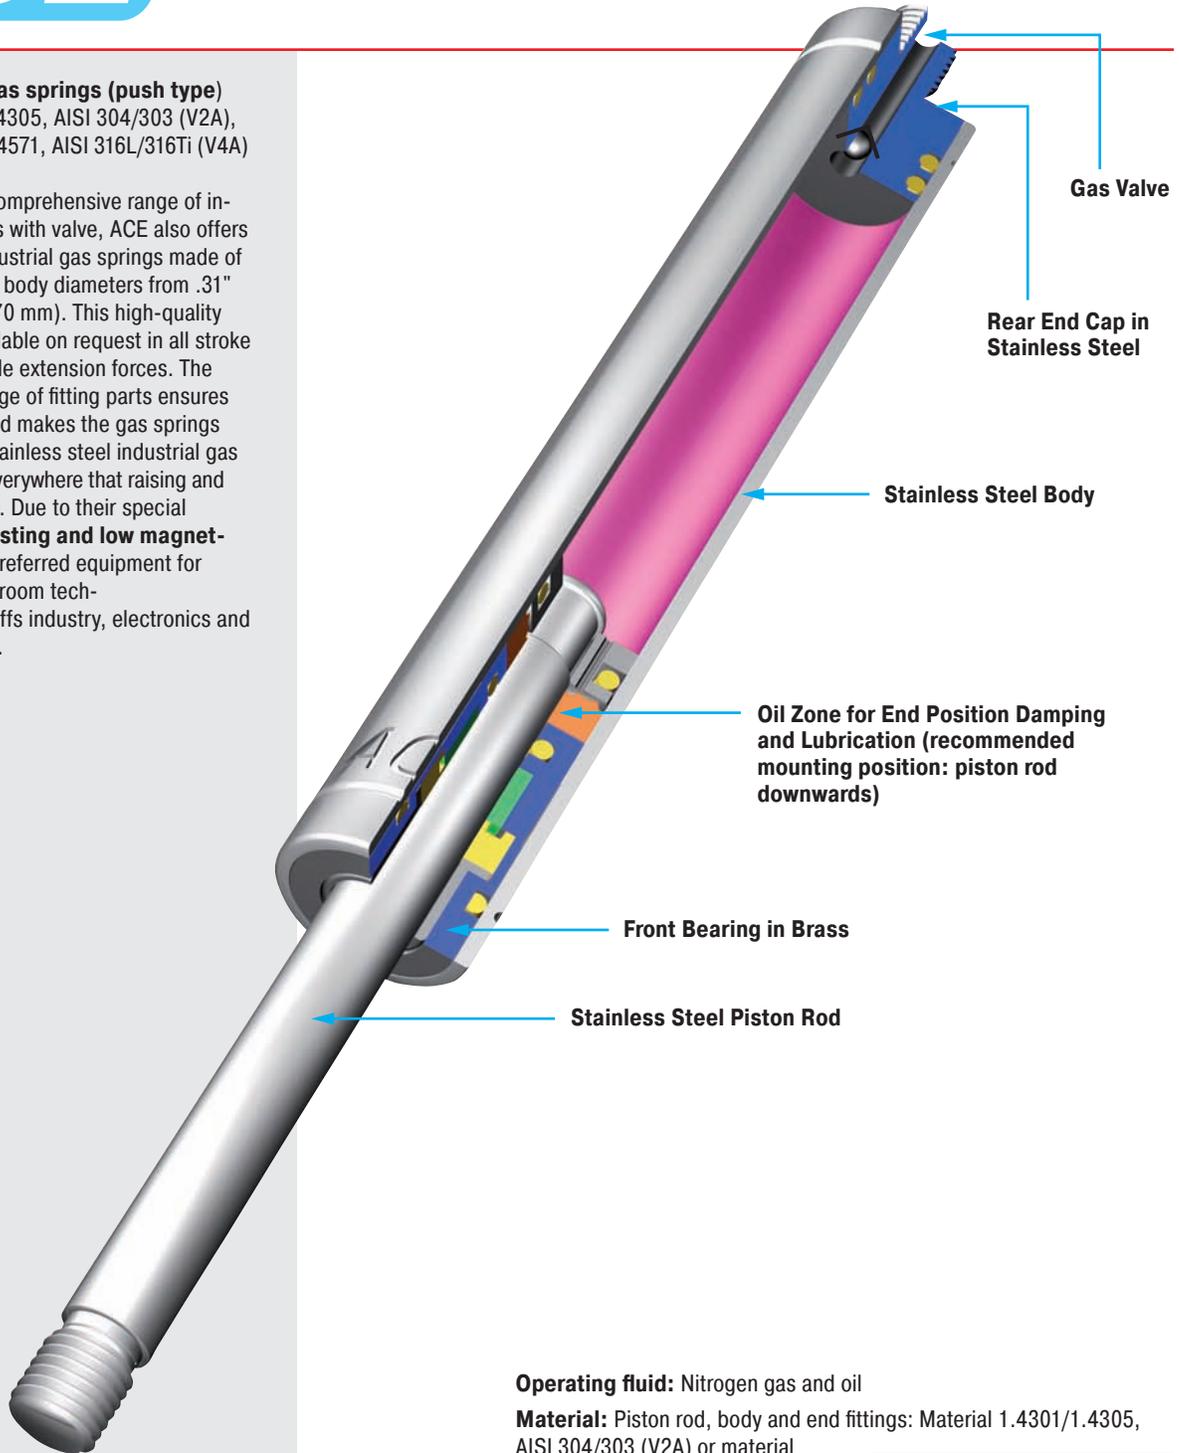

End position damping length: Strong end position damping approx. 1.18" to 2.76" (30 to 70 mm) – depending on the stroke – and slow extension speed.

Material: Piston rod: Hard chrome plated. Bodies and accessories: Zinc plated steel.

Progression: According to calculation relating to your application.

Stainless steel gas springs (push type)
 Material 1.4301/1.4305, AISI 304/303 (V2A),
 Material 1.4404/1.4571, AISI 316L/316Ti (V4A)

In addition to the comprehensive range of industrial gas springs with valve, ACE also offers a wide range of industrial gas springs made of stainless steel with body diameters from .31" to 2.76" (8 mm to 70 mm). This high-quality version is also available on request in all stroke lengths and possible extension forces. The comprehensive range of fitting parts ensures easy installation and makes the gas springs universal in use. Stainless steel industrial gas springs are used everywhere that raising and lowering is required. Due to their special properties, **non-rusting and low magnetism**, they are the preferred equipment for medical and clean-room technology, the foodstuffs industry, electronics and shipbuilding sector.

Operating fluid: Nitrogen gas and oil

Material: Piston rod, body and end fittings: Material 1.4301/1.4305, AISI 304/303 (V2A) or material 1.4404/1.4571, AISI 316L/316Ti (V4A).

Mounting: In any position

Advice: We recommend mounting with piston rod downwards to take advantage of the built-in end position damping.

Operating temperature range:
 -4 °F to 176 F (-20 °C to 80 °C)

On request: Without damping, strong end position damping, special force curves, wiper, special lengths, alternative end fittings.

Technical Data

- On request:** Without damping, increased end position damping, special force curves, special lengths, alternative end fittings and wiper.
- Available force range F_1 at 68 °F (20 °C):** 22 lbs to 270 lbs (100 N to 1,200 N)
- Mounting:** In any position
- Advice:** We recommend mounting with piston rod downwards to take advantage of the built-in end position damping.
- End position damping length:** Approx. 0.79" (20 mm) depending on the stroke
- Material:** Piston rod, body and end fittings: AISI 316L/316Ti (V4A).
- Progression:** Approx. 32%, F_2 max. 351 lbs (1,560 N)

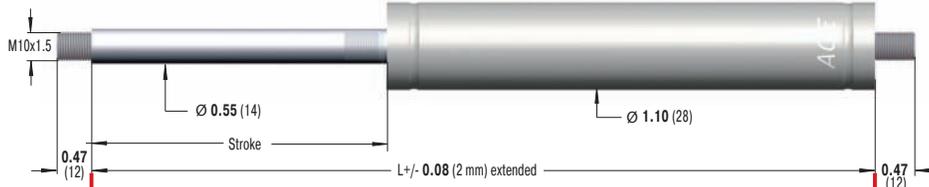

Extension Forces 34 lbs to 562 lbs (150 N to 2,500 N)
[when Piston Rod Compressed up to 854 lbs (3,800 N)]

Technical Data

- On request:** Without damping, increased end position damping, special force curves, special lengths, alternative end fittings, wiper. Gas springs and accessories: Material 1.4404/1.4571, AISI 316L/316Ti (V4A).
- Available force range F₁ at 68 °F (20 °C):** 112 lbs to 1,124 lbs (500 N to 5,000 N)
- Mounting:** In any position
- Advice:** We recommend mounting with piston rod downwards to take advantage of the built-in end position damping.
- End position damping length:** Approx. 2.24" (30 mm) depending on the stroke
- Material:** Piston rod, body and end fittings: Material 1.4301/1.4305, AISI 304/303 (V2A).
- Progression:** Approx. 40%, F₂ max. 1,574 lbs (7,000 N)

Industrial traction gas springs are maintenance-free and ready to install. They are available ex-stock with body diameters from 0.59" to 1.57" (15 mm to 40 mm) and forces from 7 lbs to 1,124 lbs (30 N to 5,000 N) with valve. **ACE traction gas springs offer a long service life due to the hard-chromed piston rod and integral sliding bearing.** They can be installed in any position. The traction force can be subsequently adjusted by means of the valve. The comprehensive range of fitting parts ensures easy installation and makes the traction gas springs universal in use. They supply the muscle force and enable the controlled raising and lowering of covers, hoods, flaps etc. With the free ACE calculation service, the traction gas springs are designed with mounting points to fit the individual application, and can be delivered ex-stock as express deliveries within 24 hours.

Gas Valve

Function: ACE industrial traction gas springs are maintenance-free, closed systems, which are filled with pressurised nitrogen gas. Compared to the push type, ACE traction gas springs work in the reverse way. The piston rod is retracted by the gas pressure in the cylinder. The surface of the piston ring between the piston rod and the inner tube determines the force of the gas spring. Traction gas springs are always mounted with the stroke fully compressed.

Operating fluid: Nitrogen gas

Mounting: In any position

Operating temperature range:

-4 °F to 176 °F (-20 °C to 80 °C)

On request: Special force curves, special lengths, alternative seals and end fittings.

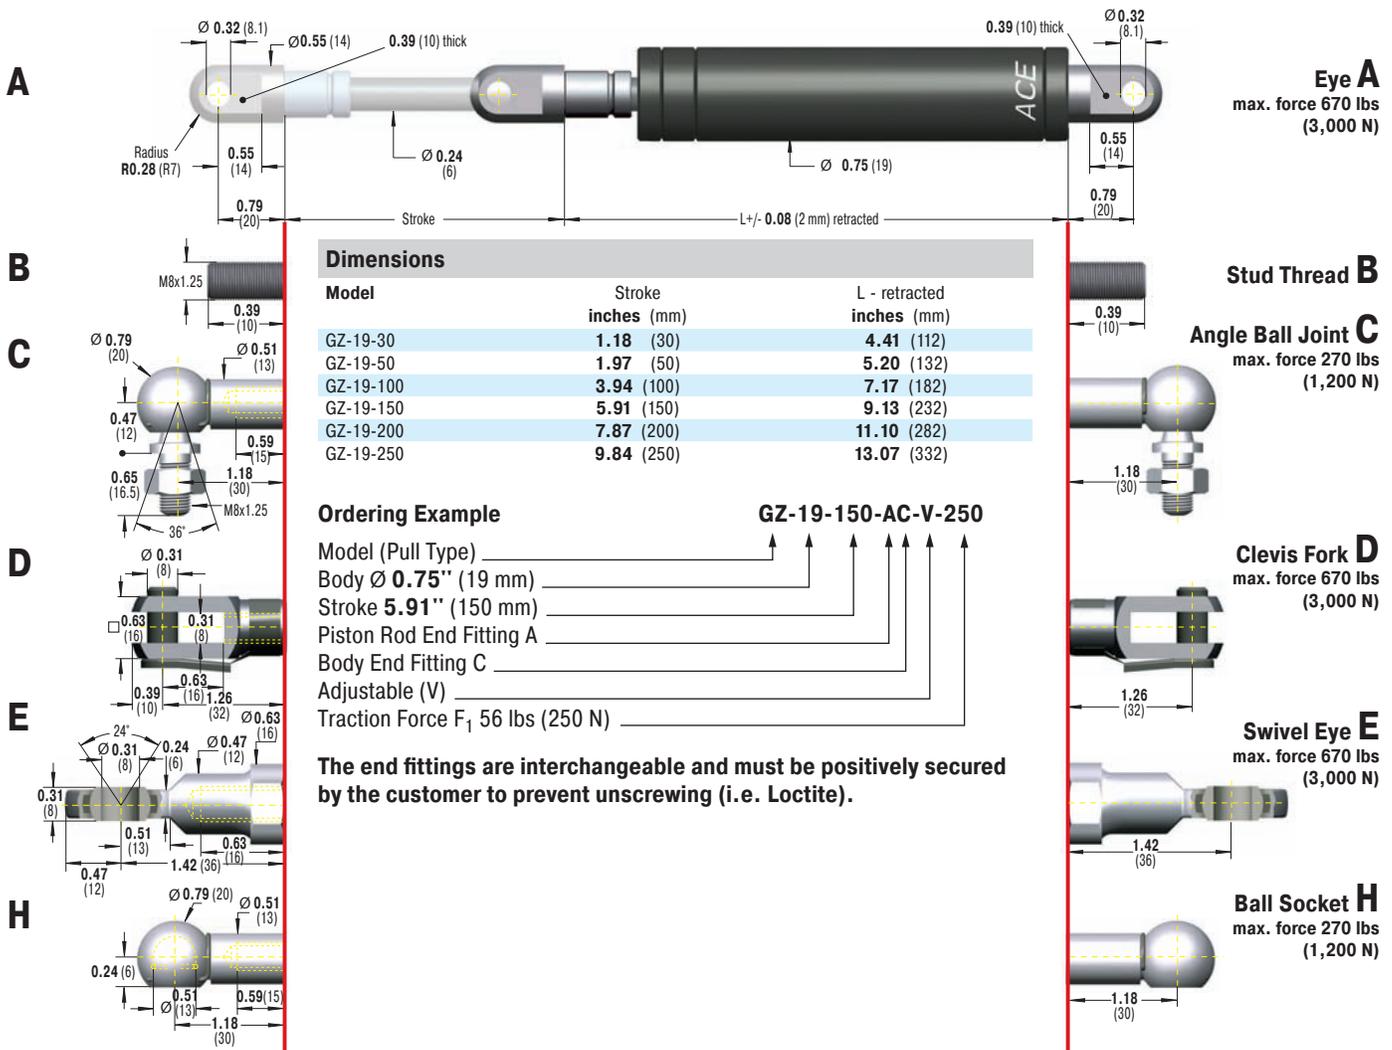

Traction (Pull) Forces 7 lbs to 67 lbs (30 N to 300 N)
[when Piston Rod Extended up to 74 lbs (330 N)]

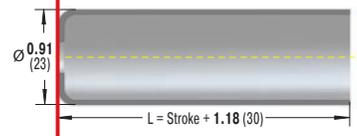

End Fitting

Standard Dimensions – inches and (mm)

End Fitting

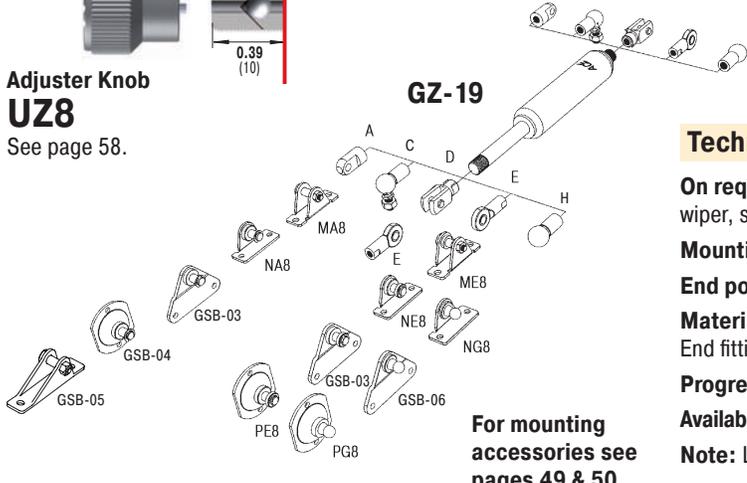

Rod Shroud W8-19

Adjuster Knob UZ8

Stainless steel industrial traction gas springs

Material 1.4301/1.4305, AISI 304/303 (V2A)
 Material 1.4404/1.4571, AISI 316L/316Ti (V4A)

In addition to the comprehensive range of industrial gas springs with valve, ACE also offers a wide range of industrial traction gas springs made of stainless steel with body diameters from 0.59" to 1.57" (15 mm to 40 mm). This high-quality version is also available on request in all stroke lengths and possible extension forces. The comprehensive range of fitting parts ensures easy installation and makes the gas traction springs universal in use. Stainless steel traction gas springs are used everywhere that raising and lowering is required. Due to their special properties, **non-rusting and low magnetism**, they are the preferred equipment for medical and clean-room technology, the foodstuffs industry, electronics and shipbuilding sector.

"The weatherproof ones!"

Operating fluid: Nitrogen gas

GZ-40-100-VA	3.94 (100)	9.84 (250)
GZ-40-150-VA	5.91 (150)	12.80 (325)
GZ-40-200-VA	7.87 (200)	15.75 (400)
GZ-40-250-VA	9.84 (250)	18.70 (475)
GZ-40-300-VA	11.81 (300)	21.65 (550)
GZ-40-400-VA	15.75 (400)	27.56 (700)
GZ-40-500-VA	19.69 (500)	33.46 (850)
GZ-40-600-VA	23.62 (600)	39.37 (1,000)

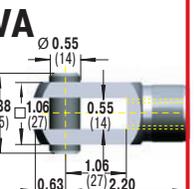

Eye A14-VA
max. force 1,574 lbs (7,000 N)

C14-VA

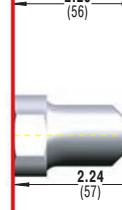

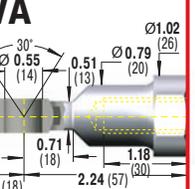

Angle Ball Joint C14-VA
max. force 719 lbs (3,200 N)

D14-VA

Clevis Fork D14-VA
max. force 1,574 lbs (7,000 N)

E14-VA

Swivel Eye E14-VA
max. force 1,574 lbs (7,000 N)

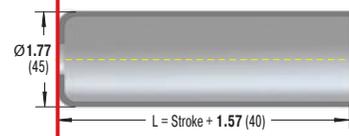

Ordering Example

GZ-40-150-EE-800-VA

Model (Pull Type) _____
 Body Ø 1.57" (40 mm) _____
 Stroke 5.91" (150 mm) _____
 Piston Rod End Fitting E14-VA _____
 Body End Fitting E14-VA _____
 Traction Force F₁ 180 lbs (800 N) _____
 Indicated by K.-No. on delivery _____

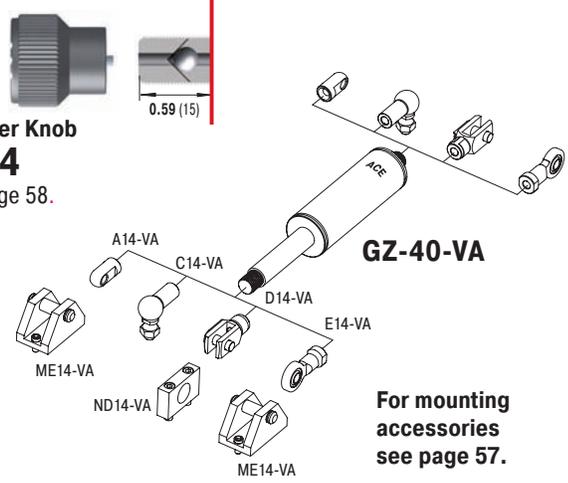

The end fittings are interchangeable.

Rod Shroud W14-40-VA

Adjuster Knob UZ14

See page 58.

GZ-40-VA

For mounting accessories see page 57.

Technical Data

On request: Special force curves, special lengths, alternative end fittings, wiper. Gas springs and accessories with material 1.4404/1.4571 (V4A).

Mounting: In any position. Install mechanical stop in extended position.

End position damping length: Without damping

Material: Piston rod, body and end fittings: Material 1.4301/1.4305, AISI 304/303 (V2A).

Progression: Approx. 40 %, F₂ max. 1,574 lbs (7,000 N)

Available traction force range F₁ at 68 °F (20 °C): 90 lbs to 1,124 lbs (400 N to 5,000 N)

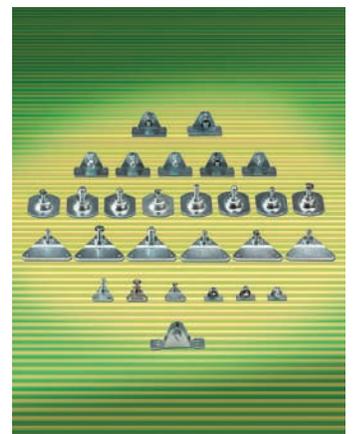

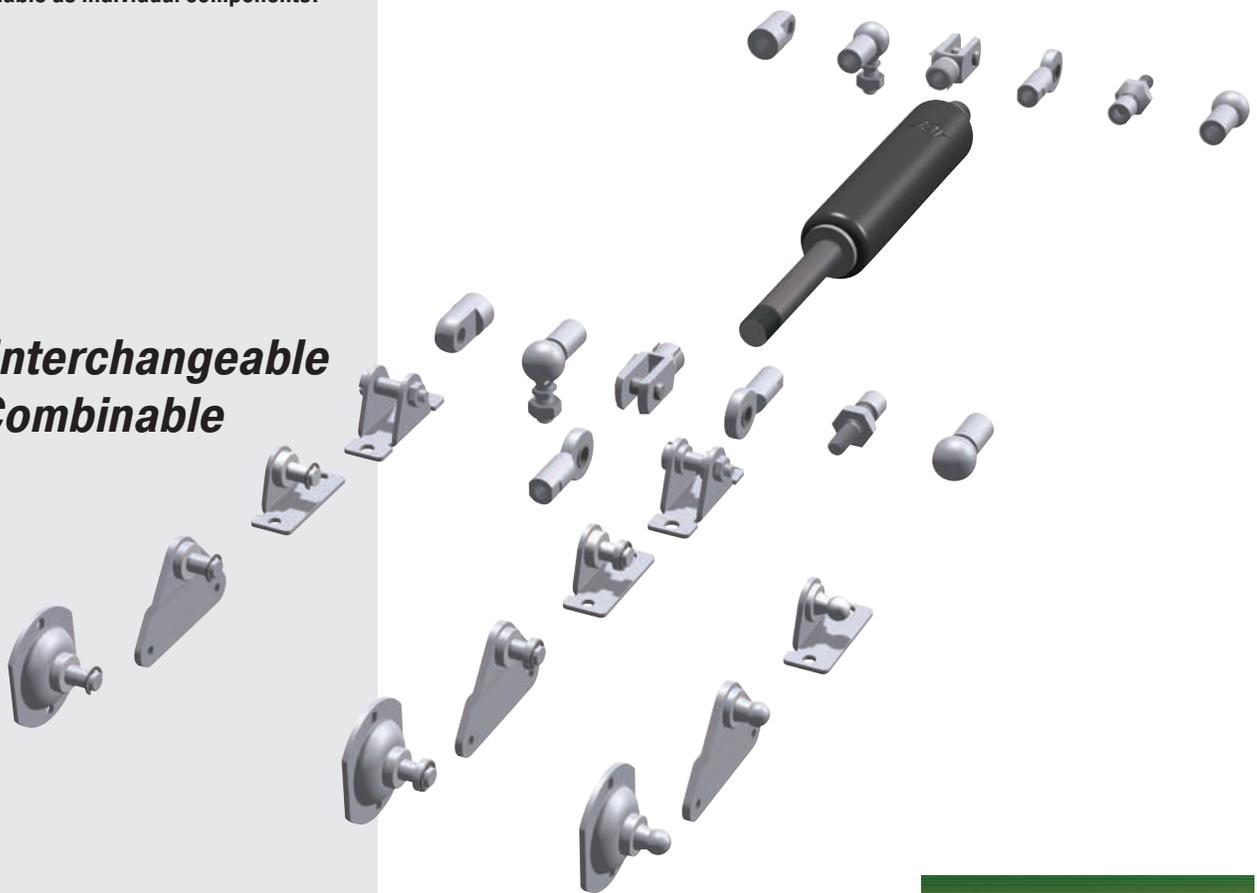

Note: Lifetime approx. 2,000 m

By taking advantage of the very extensive range of **ACE end fittings and mounting brackets** you can easily and simply install our gas springs. You profit from the variety of **DIN Standard** end fittings such as swivel eyes, clevis forks, angle ball joints, inline ball joints, and complementary ball sockets. ACE also offers eye fittings made of wear-resistant steel to meet the higher specification requirements found in industrial applications. With over 30 different types available these mounting accessories provide an extensive range of combinations for optimum installations.

The complete range of accessories are also available as individual components.

**Interchangeable
Combinable**

"Just drill 4 holes – ACE does all the rest!"

The wide range of mounting brackets available

WARNING – USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE

This document and other information from Kaydon Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Kaydon or its subsidiaries or authorized distributors. To the extent that Kaydon or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and foreseeable uses of the components or systems. ACE Controls Inc. is a business unit of Kaydon Corporation.

Adjustment Instructions Valve

Adjustment Instruction

1. Hold gas spring piston rod down.
2. Remove any fitting attached to the body end of the gas spring (GZ-19 to GZ-40 version the piston rod).
3. Insert adjuster knob on thread end on the cylinder body (on GZ-19 to GZ-40 version thread end on the piston rod). When resistance is felt, proceed slowly and with caution. This opens the valve and you can hear the nitrogen escaping and reducing pressure. Turn back the adjusting knob immediately, to avoid too much nitrogen being discharged.
4. After adjustment, remove the adjuster knob, mount the end fittings and test the gas spring in your application. If necessary repeat the procedure.

If you use 2 gas springs in parallel, both gas springs should have the same force to avoid bending forces or side load on the application. If necessary return to ACE to refill both gas springs to the same (average) force. If too much nitrogen is discharged, the units can be returned to ACE for re-gassing.

Gas Spring Refilling Kit

The **ACE gas spring refilling kit** offers you the opportunity to fill gas springs on location or adapt them individually. The refilling kit is equipped with all the parts you need to fill gas springs. Very precise filling of the gas springs is possible using the digital manometer. The table for determining the filling pressure of the gas springs is included with the case. The only thing missing from the delivery is the nitrogen.

The refilling kit contains all filling bells and adjuster knobs for the current ACE gas spring range.

Ordering name: Complete gas spring refilling kit

Item number: GS-FK-Complete

"Independence and flexibility!"

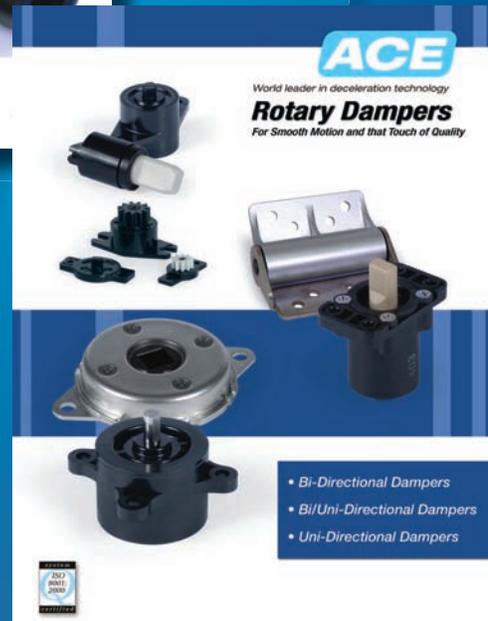

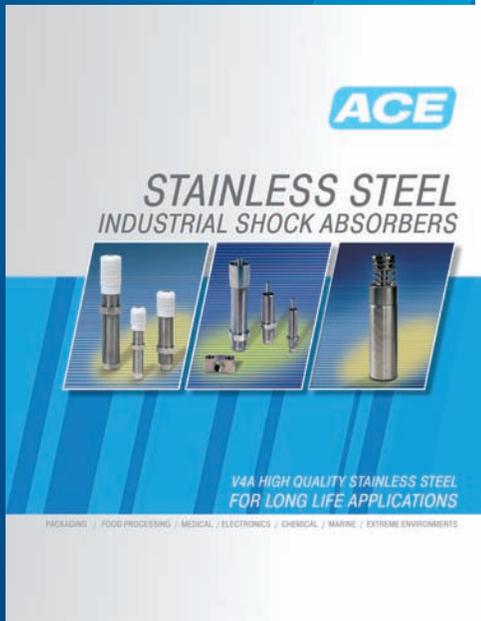

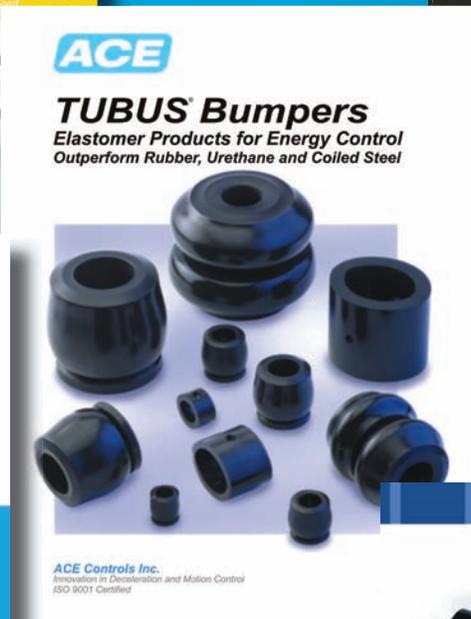

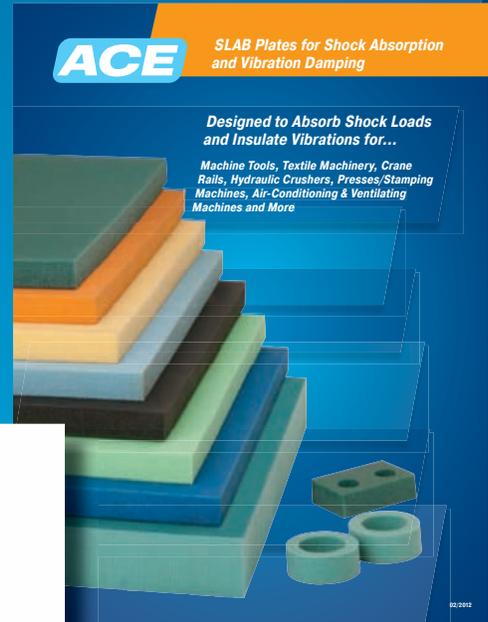

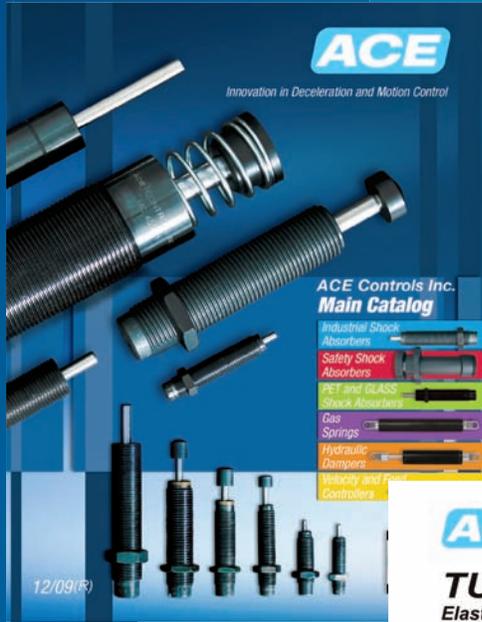

The refilling kit suits 2,900 psi (200 bar) nitrogen bottles with a thread of CGA 680. Nitrogen bottles not included. Other connections are available upon request.

Gas springs filled with the refilling kit must be measured on a calibrated measurement system by ACE for repeat production.
